

InformaCast Basic Paging and Advanced Notification

InformaCast Basic Paging provides free LIVE audio paging to 50 Cisco IP phones simultaneously. Audio is broadcast to the speaker on your Cisco IP phone or to the ear piece of your handset if your phone is in use. Easily unlock the additional advanced notification features already loaded on your Cisco UCM server with a subscription license for InformaCast Advanced Notification.

Provided by OEM Agreement with Cisco

InformaCast Basic Paging is available at no cost to customers running Cisco UCM 8.5+. InformaCast Advanced Notification can be easily activated by purchasing a subscription license, sold in blocks of 50 endpoints. (Endpoints = Cisco IP Phones or IP Speakers) Check out the link below to learn more.

New with InformaCast Advanced - Islamic Prayer Times Plugin

This plugin allows you to calculate Islamic prayer times based on your location and create a scheduled broadcast corresponding to those times. Use it to enter your location on a map based on longitude and latitude coordinates, choose the juristic method used to calculate Asr, adjust for daylight savings time, make manual adjustments for higher latitudes and more.
